EDUCATION

University of the Philippines Los Baños

Bachelor of Science in Computer Science

Relevant Coursework: Software Engineering, Artificial Intelligence, Database Systems, Operating Systems

EXPERIENCE

CINTERLabs · Full Stack Developer | Los Baños, Laguna

Sep 2025 - May 2026

- Developed a Flutter wellness tracking app targeting university constituents, built on an **offline-first architecture** where data is written to SQLite locally first, then synced to an Express.js/MongoDB backend on connectivity.
- Delivered offline-capable meal tracking with **on-device YOLOv11 AI detection** across **95+ Filipino food classes** and a gamification system to drive sustained healthy behavior.
- Enabled real campus event participation by building an admin event management system with full CRUD and attendance tracking, secured via **Google OAuth and role-based JWT authentication** across constituent and admin flows.

Moonchild Productions · Software Engineering Intern | Motala, Sweden

Jun 2025 - Jul 2025

- Extended the **Goanna rendering engine's CSS parser** to support 5 comparison operators in production, modifying token scanning, expression evaluation, and serialization.
- Eliminated a legacy vendor-prefixed dead codepath from the production CSS parser, **reducing parser complexity** and enforcing modern web standards compliance across style property tables, parser definitions, and computed style handling.
- Delivered multiple production changes in a **large C++ browser engine codebase**, independently expanding beyond assigned tasks to resolve additional parser-related issues within 2 months.

Stable Studio · Full Stack Developer | Hong Kong

Nov 2024 - Mar 2025

- Delivered full-stack internal web applications for paid client projects as part of a 3-person development team, owning **schema design** and Next.js + Tailwind frontend implementation.
- Owned the **full request lifecycle from API to UI**, coordinating contracts with teammates before implementation to minimize integration bugs at client handoff.
- Gathered and clarified requirements directly with clients, translating business needs into **API contracts and technical specs** that guided implementation.

PROJECTS

Rubric · AI-Powered Essay Feedback Platform

May 2026

- Built and deployed a full-stack platform with Next.js, FastAPI, Supabase, AWS S3/Lambda, and Groq API, using **Claude Code** for scaffolding and iteration, automating rubric-based essay feedback for teachers and students.
- Developed an **async PDF pipeline** using S3 ObjectCreated triggers, AWS Lambda, PyPDF2, and Llama 3.3 70B via Groq, converting uploaded essays into structured rubric-aligned feedback.
- Designed feedback views with per-criterion scores, progress indicators, summaries, and status tracking, turning raw submissions into **actionable evaluations**.

Sinehan · AI Movie Recommendation Web App

Mar 2026

- Grew to **30+ users** with a weekly automated email digest via n8n, delivering personalized recommendations from user watchlists, secured via Google OAuth and JWT authentication.
- Designed and implemented a **4-step AI recommendation pipeline** that interprets user mood, generates title candidates via Groq API, enriches them with TMDb metadata, and produces a personalized pitch per pick, deployed end-to-end as a full-stack web app.

Proxy · RAG-Powered Portfolio Chatbot

Feb 2026

- Built a **RAG-powered portfolio chatbot** using LangChain, ChromaDB, and FastEmbed to let recruiters conversationally query a personal knowledge base, grounding Llama 3.3 70B responses with retrieved context for accurate, relevant answers.
- Implemented markdown-aware chunking with section-boundary splitting and top-5 cosine similarity retrieval, using a **fully local FastEmbed embedding model** with no API dependency, keeping inference costs minimal.

SKILLS

Languages: Python, JavaScript, TypeScript, Dart, SQL, C, C++

Frontend: React.js, Next.js, Tailwind, Flutter, TypeScript

Backend: Node.js, Express.js, FastAPI, Python

AI / ML: LangChain, OpenAI API, Groq API, RAG Pipelines, ChromaDB, FastEmbed, Recommendation Systems

AI Workflow: Claude Code, n8n, Label Studio

Databases: MongoDB, Supabase, Firebase, PostgreSQL, SQLite, MySQL

Cloud & DevOps: AWS (S3, Lambda), Docker, Git, GitHub
