EDUCATION

University of the Philippines Los Baños

2022-2026

Bachelor of Science in Computer Science

Relevant Coursework: Software Engineering, Artificial Intelligence, Database Systems, Operating Systems

EXPERIENCE

CINTERLabs · Full Stack Developer | Los Baños, Laguna

Sep 2025 - May 2026

- Developed a Flutter wellness tracking app for university constituents by architecting an **offline-first system** that writes data to SQLite locally before syncing to an Express.js/MongoDB backend, ensuring reliable use in low-connectivity campus areas.
- Built offline-capable meal tracking by integrating **on-device YOLOv11 AI detection** across **95+ Filipino food classes** with a gamification layer, driving sustained healthy behavior among constituents.
- Enabled real campus event participation by building an admin event management system with full CRUD and attendance tracking, secured via **Google OAuth and role-based JWT authentication** across constituent and admin flows.

Moonchild Productions · Software Engineering Intern | Motala, Sweden

Jun 2025 - Jul 2025

- Extended the **Goanna rendering engine's CSS parser** by implementing 5 comparison operators across token scanning, expression evaluation, and serialization, shipped to production.
- Eliminated a legacy vendor-prefixed dead codepath by refactoring style property tables, parser definitions, and computed style handling, **reducing the parser codebase by 15%** and enforcing modern web standards.
- Delivered **multiple production changes** to a large C++ browser engine codebase by independently identifying and resolving parser-related issues beyond assigned scope, all within a 2-month internship.

Stable Studio · Full Stack Developer | Hong Kong

Nov 2024 - Mar 2025

- Delivered full-stack internal web applications across **10+ client projects** by owning schema **design** and Next.js + Tailwind frontend implementation as part of a **3-person** development team.
- Minimized integration bugs at client handoff by owning the **full request lifecycle from API to UI** and coordinating contracts with teammates before implementation.
- Translated business needs into accurate **technical specs** by gathering and clarifying requirements directly with clients, guiding implementation of API contracts.

PROJECTS

Rubric · AI-Powered Essay Feedback Platform

May 2026

- Built and deployed a **full-stack platform** using Next.js, FastAPI, Supabase, AWS S3/Lambda, and Groq API, automating rubric-based essay feedback for teachers and students.
- Automated essay evaluation by developing an async PDF pipeline with S3 ObjectCreated triggers, AWS Lambda, PyPDF2, and Llama 3.3 70B, delivering rubric-aligned feedback in **~5-7 seconds** for **text submissions** and **~15-25 seconds** for **PDF submissions**.
- Improved feedback clarity by designing per-criterion score views with progress indicators, summaries, and status tracking, turning raw submissions into **actionable evaluations**.

Sinehan · AI Movie Recommendation Web App

Mar 2026

- Grew the platform to **30+ active users** by building a weekly automated email digest via n8n that delivers personalized movie recommendations from user watchlists, secured via Google OAuth and JWT authentication.
- Designed and implemented a **4-step AI recommendation pipeline** that interprets user mood, generates title candidates via Groq API, and enriches them with TMDb metadata, deploying it end-to-end as a full-stack web app that produces a personalized pitch per pick.

Proxy · RAG-Powered Portfolio Chatbot

Feb 2026

- Built a **RAG-powered portfolio chatbot** using LangChain, ChromaDB, and FastEmbed by grounding Llama 3.3 70B responses in retrieved context, letting recruiters conversationally query a personal knowledge base for accurate, relevant answers.
- Reduced inference costs by implementing markdown-aware chunking, top-5 cosine similarity retrieval, and a **fully local FastEmbed embedding model** with no API dependency.

SKILLS

Languages: Python, JavaScript, TypeScript, Dart, SQL, C, C++

Frontend: React.js, Next.js, Tailwind, Flutter, TypeScript

Backend: Node.js, Express.js, FastAPI

AI / ML: LangChain, OpenAI API, Groq API, RAG Pipelines, ChromaDB, TensorFlow, PyTorch

AI Workflow: Claude Code, n8n, Label Studio

Databases: MongoDB, Supabase, Firebase, PostgreSQL, SQLite, MySQL

Cloud & DevOps: AWS (S3, Lambda), Docker, Git, GitHub

CERTIFICATIONS

AI Engineer for Developers Associate — DataCamp | 2026

SQL Associate — DataCamp | 2026
